

THUNDERSTRUCKMOTORS

Coda DTC Reset Tool

The ThunderStruck Motors Diagnostic Trouble Code Reset tool (DTC Reset) uses a pre-programmed OBDII canbus device to reset common DTC entries in the Coda vehicle system.

The DTC Reset tool is programmed to reset trouble codes from the following modules: ACCM, BMS, DLCM, GWM , HVAC and EPS.

The kit includes an OBDII connector as shown on the website.

The following simple procedure perform the DTC Reset:

1. Turn the car key one click to the "On" position (not all the way to start)
2. Plug DTC Reset tool into the Coda OBDII port to the left of the steering wheel
3. Wait for 30 seconds for the DTCs to reset
4. Unplug the tool
5. Turn the key off
6. Start the car and verify the reset

Trouble codes may recur if the issue has not been resolved. The DTC Reset tool is programmed for the Coda vehicle only. Do not plug the device into any other OBDII system. In case of unexpected results, unplug the device and contact ThunderStruck Motors for support.
